Title: NET METERING

**NET METERING**

**1. AVAILABILITY**

- A. To any residential or commercial customer who takes service under standard rate schedule(s) (list schedules) who has installed a net metering facility and signed a Standard Interconnection Agreement for Net Metering Facilities with the Utility. Such facilities must be located on the customer’s premise and intended primarily to offset some or all of the customer’s energy usage at that location. The provisions of the customer’s standard rate schedule are modified as specified herein.
- B. Customers may not take service under this tariff and simultaneously take service under the provisions of any other alternative source generation or co-generation tariff.

**2. MONTHLY BILLING**

- A. On a monthly basis, the net metering customer shall be billed the charges applicable under the currently effective standard rate schedule and any appropriate rider schedules. Under net metering, only the kilowatt-hour (kWh) units of a customer’s bill are affected.
- B. If the kWhs supplied by the electric utility exceeds the kWhs generated by the net metering facility and fed back to the electric utility during the billing period, the net metering customer shall be billed for the net kWhs supplied by the electric utility in accordance with the rates and charges under the customer’s standard rate schedule.
- C. Where the electricity generated by the net metering customer exceeds the electricity supplied by the electric grid, the net metering customer shall be credited during the next billing period for the excess kilowatt hours generated in accordance with this section. The utility shall credit the net metering customer for the excess generated electricity at a value that is at avoided cost.
- D. Upon exit from the net energy metering system, there shall be no payment or credit to a net metering customer for any remaining excess generation.
- E. All credits that the net metering customer does not use during the calendar year expire at the end of the calendar year.
- F. The utility may bill the net metering customer charges that otherwise would have accrued during a billing period in absence of the excess generated electricity.
